Question: 1

Emergencies can arise in an organization at any time and from many different causes. The best safety management tool for minimizing disaster is to:

- A. Screen candidates and hire only safe workers
- B. Have a written comprehensive management plan
- C. Keep in good contact and relations with the local fire department
- D. Purchase only safe equipment and materials

Answer: B

Explanation:

All the other answers are good ideas but no matter how safe you think you are, an incident can happen. Therefore, the only way to be prepared is to have a written comprehensive management plan.

Question: 2

D. continue laying groundwork for sexuality, understanding of gender roles grows, masturbation (normal and acceptable), curiosity and sex play are typical

Answer: A

Question: 6

On the job injuries and illness cost money, time, and effort. What is the most practical way to manage these losses?

A. Make sure safety is part of labor contracts
B. Aggressive claims handling
C. Effective safety and loss control programs
D. Good insurance coverage

Answer: C

Explanation:

On the job injuries and illnesses cost money, both in direct costs such as workers' compensation payments, and indirect costs such as investigation time, replacement training, product damage, and lower morale. It is better to prevent losses through a safety program than to try to reduce the expenses after the injury has happened.

Question: 7

Class D –used to extinguish combustibles metals

Question: 9

Mesothelioma is associated with

- A. Welders
- B. Asbestos Workers
- C. Beryllium Workers
- D. Excessive Vibration

Answer: B

Question: 10

The process of pooling security ideas and viewpoints of architects, security and safety professionals and local police and fire officials in a coordinated effort to produce a facility with planned defenses before the actual construction is known as what?

- A. SMBO
- B. Crime prevention through environmental design (CPTED)
- C. Safe Construction
- D. Planned Protection

Answer: B

Explanation:

Crime prevention through environmental design (CPTED)

Crime prevention through environmental design takes into account everyone's viewpoints into the security of the building. It is done during the planning stage of the building and grounds. This helps security because it has features built in by the architects with safety professionals and local police ideas still fresh in their head when designing. Instead of trying to put safety first after the building is already built with design flaws that employees must try to work around.
