## Question: 1

For managing and securing user endpoints in a distributed enterprise, which Cisco solution would you employ?

Response:

- A. Meraki
- B. Endpoint Agent
- C. Catalyst Center
- D. Secure Client

**Answer: D**

## Question: 2

When diagnosing web application performance issues, what does a browser waterfall primarily help identify?

Response:

- A. Network encryption strength
- B. Time to first byte (TTFB)
- C. SSL certificate validity
- D. Firewall throughput

**Answer: B**

## Question: 3

Why might an organization choose digest over basic authentication when configuring tests?  
(Choose Two)

Response:

- A. Digest offers better performance under load.
- B. Digest does not transmit passwords in clear text.
- C. Digest requires less configuration on the client side.
- D. Digest provides a higher level of security than basic authentication.

**Answer: B,D**

---

### Question: 4

What are the key metrics to monitor when setting alerts for connectivity changes from wired to wireless networks?

(Choose Two)

Response:

- A. Signal strength fluctuations
- B. Change in IP address
- C. Encryption type used
- D. Bandwidth utilization

**Answer: A,B**

### Question: 5

In deploying endpoint agents on Room OS devices, what unique challenge must be considered?

Response:

- A. High availability requirements
- B. Compatibility with video conferencing software
- C. Limited user interface options
- D. Integration with mobile devices

**Answer: C**

### Question: 6

According to RFC 7276, which monitoring approach is more likely to be used for compliance auditing in real-time environments?

Response:

- A. Active monitoring
- B. Passive monitoring
- C. Both active and passive monitoring
- D. Neither, as RFC 7276 does not discuss compliance auditing

**Answer: A**

### Question: 7

---

Route leaking is best identified through which of the following techniques?

Response:

- A. Password strength testing
- B. BGP route analysis
- C. Antivirus scanning
- D. Application whitelisting

**Answer: B**

### Question: 8

Enterprise agents installed on application servers primarily help in monitoring what aspect of network performance?

Response:

- A. Server uptime
- B. Application response time
- C. Data breach attempts
- D. Physical server security

**Answer: B**

### Question: 9

Which Meraki Insight feature is crucial for diagnosing issues related to jitter in VoIP calls?

Response:

- A. Traffic analytics
- B. Voice quality monitoring
- C. Application health scores
- D. Connectivity heat maps

**Answer: B**

### Question: 10

How does Meraki Insights help in identifying latency issues across network segments?

Response:

- A. By comparing historical data trends

- 
- B. By isolating high latency connections
  - C. By enforcing network access policies
  - D. By simulating network attacks

<b>Answer: B</b>
