Question: 1

What are two common migration methods available in Hitachi NAS systems?

(Choose two)

Response:

- A. Thin provisioning
- B. Live migration
- C. Full cloning
- D. Incremental replication

Answer: B,D

Question: 2

Data replication in Hitachi NAS systems is critical for _____, allowing data to be available in the event of hardware failure or other disasters.

Response:

- A. Compression
- B. High availability
- C. Encryption
- D. Virtualization

Answer: B

Question: 3

How does VLAN tagging function in Hitachi NAS systems?

Response:

- A. It assigns specific VLANs to storage pools.
- B. It segments network traffic based on VLAN IDs.
- C. It optimizes file system access for users.
- D. It routes data between NAS systems.

Answer: B

Question: 4

What are the key characteristics of system drives used in Hitachi NAS systems?

Response:

- A. High capacity but slower speeds
- B. Low capacity but high speed and reliability
- C. High capacity and high speed
- D. Low capacity and lower speed

Answer: B

Question: 5

Which two protocols are used for file sharing in Windows and Unix/Linux environments in Hitachi NAS systems?

(Choose two)

Response:

- A. NFS
- B. SMB
- C. FTP
- D. NDMP

Answer: A,B

Question: 6

In Hitachi NAS systems, _____ allows administrators to create exact duplicates of file systems for testing without affecting the original data.

Response:

- A. Cloning
- B. Replication
- C. Tiering
- D. Thin provisioning

Answer: A

Question: 7

Hitachi NAS systems support _____, which allows for data transfer from legacy systems without significant downtime.

Response:

- A. Live migration
- B. Data replication
- C. Thin provisioning
- D. Virtualization

Answer: A

Question: 8

How does tiered storage improve data management in Hitachi NAS systems?

Response:

- A. By distributing data evenly across all storage pools
- B. By assigning different data types to the most appropriate storage medium
- C. By compressing data automatically
- D. By migrating data to the cloud for long-term storage

Answer: B

Question: 9

_____ allows the VSP 5000 systems to maintain operations across two sites simultaneously.

Response:

- A. Replication
- B. Clustering
- C. Dynamic tiering
- D. Load balancing

Answer: B

Question: 10

Which protocol is commonly used for file replication in Hitachi NAS systems to ensure high availability and disaster recovery?

Response:

- A. NFS
- B. SMB
- C. NDMP
- D. HTTP

Answer: C
