2. Knowledge, Marketing, CRM, Sales & Purchase Modules
3. Project, Timesheets, Accounting Modules
4. Inventory, MRP & HR Modules
5. Spreadsheet, Studio & POS Module

Question: 1

How would you explain this search?

The screenshot shows the Odoo search interface for the 'Products' module. The search bar contains two conditions: 'Product Category --> Complete Name contains tables' and 'Product Category --> Complete Name contains storage cabinets'. Both conditions are highlighted with red boxes, indicating an AND search. The search bar also includes a 'Search...' button and a 'New Products' button.

- A. It's just a double "Group-by" selection
- B. It's an "OR" condition search
- C. It's an "AND" condition search

Answer: C

Explanation:

This explanation is correct because the search described requires both conditions to be met, making it an "AND" condition search. This means that the search results will only include records that satisfy both criteria simultaneously.

Question: 2

According to the screenshot below (assuming the attributes 'Legs ' and 'Color ' always generate variants), how many variants will be generated?

The screenshot shows the Odoo product configuration interface. The 'Attributes & Variants' tab is selected. Under the 'Attribute' column, there are two attributes: 'Legs' and 'Color'. The 'Legs' attribute has three values: 'Steel', 'Aluminium', and 'Custom'. The 'Color' attribute has two values: 'White' and 'Black'. Each attribute has a 'Configure' button and a trash icon.

- A. 6
- B. 9
- C. 2
- D. 5

Answer: A

Question: 3

In the 'Options' tab of a survey form, what are the 'Display Progress as' options?

- A. Percentage left' and 'Number'
- B. Percentage left' and 'Progress bar'
- C. Progress bar' and 'Number'

Answer: A

Explanation:

'Percentage left' and 'Number' are the correct options available in the 'Display Progress as' section of the 'Options' tab in a survey form. These options allow users to choose between displaying the progress as a percentage remaining or as a numerical value.

Question: 4

What is the difference between a message/discussion and a log note in the chatter?

- A. There is no difference between a message/discussion and a log note in Odoo
- B. A message/discussion is sent to the customer and notifies all the followers, whereas a log note is only seen in the chatter by internal users or via @ mentions
- C. Messages/discussions are sent to customers via email from Odoo while log notes are only sent via Odoo internal notifications to customers

Answer: B

Explanation:

A message/discussion in the chatter is a communication that is sent to the customer and notifies all the followers of the record. It is visible to both internal users and external customers. On the other hand, a log note is only seen in the chatter by internal users or via @ mentions. It is not sent to customers and is used for internal communication or notes that do not need to be shared with external parties.

Question: 5

On what support can you decide to hide certain content blocks when editing your website?

- A. Desktop, mobile, and tablet
- B. Desktop and mobile
- C. Desktop

Answer: B

Explanation:

Deciding to hide certain content blocks when editing your website based on the support of both desktop and mobile devices allows for a more comprehensive approach to optimizing the user experience. This ensures that the website looks consistent and functions well across different screen sizes and devices, leading to a better overall user experience.

Question: 6

What needs to be done to reset a broken email template back to the original template?

- A. It's not possible to fix an email template without going into the technical menu and deleting the template and upgrading the module
- B. Go to General Settings, click 'Review All Templates', open the email template form, and click on 'Reset Template'
- C. Contact Odoo support to restore broken templates

Answer: B

Explanation:

Going to General Settings, clicking on 'Review All Templates', opening the email template form, and clicking on 'Reset Template' is the correct way to reset a broken email template back to the original template. This process can be easily done without the need for technical knowledge or support.

Question: 7

Is it possible to hide a building block for a specific language?

- A. Yes, by using block conditional visibility
- B. No, it's not possible to hide a block by language but only by country
- C. No, you can only customize text between languages

Answer: B

Explanation:

In Odoo, it is not possible to hide a building block for a specific language. The visibility of blocks can be controlled based on conditions like the user's country, but language-specific hiding is not a supported feature in the platform.

Question: 8

What option in Odoo can help a user better protect their account?

- A. VPN (Virtual Private Network)
- B. Use an incognito browser window
- C. 2FA (Two-Factor Authentication)

Answer: C

Explanation:

2FA (Two-Factor Authentication) is a security process that requires users to provide two different authentication factors to verify their identity before gaining access to their account. By enabling 2FA in Odoo, users add an extra layer of security to their account, making it more difficult for unauthorized users to access their account even if the password is compromised. This option is directly related to enhancing the security of the user's Odoo account.

Question: 9

Are building blocks shared across all themes or specific to each one?

- A. Some building blocks are shared between different themes; others don't
- B. All themes share the same building blocks and features
- C. Building blocks are specific to each theme - that's why you start with the theme selection

Answer: B

Explanation:

All themes in Odoo share the same building blocks and features. This means that users can easily switch between themes without losing any content or functionality, as the building blocks are consistent across all themes.

Question: 10

All products with attribute 'A' are automatically priced \$100 higher than products with attribute 'B'. How can you automate this price difference?

- A. By changing the 'Default Extra Price' value in the backend of that attribute
- B. This can only be done with a pricelist
- C. In 'Sales Price' on product variants

Answer: C

Explanation:

Setting the price difference in the 'Sales Price' field on product variants allows you to automate the price increase for products with attribute 'A' compared to products with attribute 'B'. By specifying the higher

price directly on the product variants, the system will automatically apply the price difference when those products are sold.
