Latest Version: 6.0

Question: 1

What will have the biggest impact on host performance in a stretched cluster environment?
Response:

- A. Host reads
- B. Deduplication ratios
- C. Sync-Rate on snapshots
- D. Round trip latency between sites

Answer: D

Question: 2

Which IBM Spectrum Virtualize action shows LUNs that have been mapped for virtualization?
Response:

- A. Zone Storage
- B. Assign Storage
- C. Discover Storage
- D. Authorize Storage

Answer: C

Question: 3

Which statement is true about virtualization of storage with IBM Spectrum Virtualize?
Response:

- A. It is possible to virtualize a NAS, Network Attached Storage.
- B. The connectivity supported on the backend is only via Fiber Channel.
- C. Verify the storage array to be virtualized is supported on the IBM SSIC website.
- D. A SAN switch establishing the direct connection between IBM Spectrum Virtualize and Storage is required for virtualization of storage.

Answer: C

Question: 4

What is the purpose of using a consistency group in a Metro Mirror and Global Mirror replica?
Response:

- A. to force the synchronism between the volumes within the group
- B. to maintain the consistency of data transmission links
- C. to maintain the consistency of groups of hosts or clusters
- D. to keep data synced across all the relationships that are being replicated within the group

Answer: D

Question: 5

Which features must be enabled in the browser to manage IBM Spectrum Virtualize?
Response:

- A. JavaScript and Cookies
- B. Shockwave Flash and JavaScript
- C. OpenH264 Video Codec and Shockwave Flash
- D. Widevine Content Decryption Module and Cookies

Answer: A

Question: 6

Which parameter can be modified to control the initial rate of data transfer between two copies of a volume mirror?
Response:

- A. Extent Size
- B. Flow Control
- C. Buffer Credits
- D. Synchronization Rate

Answer: D

Question: 7

Which FlashCopy preset creates a copy of the source volume data on a target volume that can be incrementally updated?

Response:

- A. Clone
- B. Backup
- C. Archive
- D. Snapshot

Answer: B

Question: 8

In an automatic upgrade of a single I/O group SAN Volume Controller system after the first node is upgraded, how long is the pause before the second node starts to update?

Response:

- A. 10 minutes
- B. 20 minutes
- C. 30 minutes
- D. 40 minutes

Answer: C

Question: 9

What does a VMware host use to establish a data path to a virtual volume?

Response:

- A. round robin
- B. static route
- C. protocol endpoints
- D. virtual dynamic paths

Answer: C

Question: 10

A customer with two IBM FlashSystem 7200s clustered together notices increased I/O on intrasystem links at night when they run snapshots with IBM Copy Data Manager. What should the administrator look for as a cause for this increased I/O?

Response:

- A. clean rate is set high
- B. source and target are on different I/O groups
- C. snapshots were created with the backup definition
- D. source and target are on different nodes in the same I/O group

Answer: B
